

Functional requirements of my project:

The program must...

Run on Windows: High priority

Comprehend the user's input, or understand what he/she said: High priority, ~29 hours

Take a user input: high priority

Generate an output based on the user's input: Low Priority

Performance requirements:

The programs output must be a reasonable response to the user's input: High priority, ~18 hours

The program must give varied responses to the user's input: Medium priority, ~8 hours

The program must be able to carry on the conversation for 15 turns: Low priority, ~4 hours

The program must not generate any errors

Environmental Constraints:

The program must contain no code written by anybody but Drew Ingram, excluding Open Source code that is properly cited
